SUMMARY

Senior Software Engineer with 9+ years building and operating high-uptime systems for mission-critical industries. Hands-on across **Java/Spring Boot**, **Python/Django** and **React**, with data engineering experience (real-time pipelines and cold storage on **S3 + Parquet**). Used to diagnosing and resolving production issues for enterprise clients, working directly with support and product stakeholders, owning architecture decisions and mentoring engineers. Author of CoDaF, an internal data persistence framework adopted organization-wide.

CORE SKILLS

Backend: Java, Spring Boot, Hibernate, Python, Django, REST APIs, Event-Driven Architecture, Microservices, DDD, TDD, Clean Architecture
Frontend: React.js, TypeScript, JavaScript
Data: AWS S3 / Parquet (cold storage), Real-Time Data Pipelines, Data Engineering, PostgreSQL, SQL, WITSML, Analytics
Infra & Observability: AWS (EC2, S3), Azure, GCP, Docker, Kubernetes, Prometheus, Grafana, ELK, GitLab CI, GitHub Actions
Leadership: Technical Leadership, Code Review, Mentoring, Stakeholder Management, Agile

WORK EXPERIENCE

Senior Backend Engineer · Intelie

Feb 2020 – Present | Rio de Janeiro, Brazil · Remote

Leadership & client work

- Own the relationship with a key oil & gas client: lead recurring meetings and discovery sessions, translate operational needs into engineering solutions, and help shape the product roadmap.
- Reduced the client-reported ticket backlog from **24 to 3** open issues within weeks, restoring SLA health.
- Led architecture and delivery of **3 platform initiatives**; defined engineering standards, ran code reviews and mentored engineers in DDD, TDD and CI/CD.
- Maintained **99.9%+ uptime** SLAs on production systems serving clients with continuous 24/7 operations.

Architecture & full stack

- Built a **well campaign planner** (drilling, completion and related phases) in an R&D initiative using **Python/Django**.
- Decomposed a legacy monolith into **6 independently deployable microservices** (Java, Spring Boot, Docker, Kubernetes), improving deployment agility and reducing cross-service dependencies.
- Re-architected server-side call orchestration, cutting active instances from **2,000+ to under 150** with full functional coverage, removing server overload risk.
- Designed and shipped **CoDaF**, an internal data persistence framework adopted organization-wide: eliminated 3 redundant storage abstractions, enabled runtime schema provisioning and reduced data inconsistency incidents.

Data engineering

- Worked with a **cold-storage layer on AWS S3 using Parquet** for historical sensor data, alongside the real-time pipelines.
- Built real-time **ML fault detection pipelines** ingesting sensor telemetry from critical oil & gas infrastructure, enabling early anomaly detection for 24/7 clients.
- Led standardization of **WITSML** data ingestion, aligning with oil & gas interoperability requirements.
- Implemented an OCR automation pipeline for ML data ingestion, reducing manual data preparation effort.

Stack: *Java, Spring Boot, Hibernate, Python, Django, PostgreSQL, AWS (S3), Parquet, Azure, Docker, Kubernetes, Prometheus, GitLab CI, GitHub Actions, WITSML*

Software Engineer · Grupo Fratelli

Dec 2016 – Dec 2019 | Duque de Caxias, Brazil · On-site

- Architected and delivered a multi-warehouse management system end-to-end (inventory, fiscal integration, reporting) across 3+ distribution centers.
- Eliminated data silos between warehouse and finance by integrating SQL-backed inventory with fiscal workflows, enabling real-time stock visibility.

Stack: *PHP, SQL, JavaScript*

SELECTED PROJECTS

- **Well Campaign Planner** (Intelie, R&D) – Python/Django application for planning well campaigns (drilling, completion and related phases).
- **CoDaF** (Intelie) – Data persistence framework standardizing storage across a distributed platform; adopted organization-wide.
- **Real-Time Fault Detection Pipeline** (Intelie) – Ingestion, processing, anomaly detection and alerting for oil & gas telemetry within 99.9%+ uptime SLAs.

EDUCATION & CERTIFICATIONS

B.Sc. Computer Science – Universidade Estadual do Rio de Janeiro (UERJ), Jul 2024
Java Multithreading, Concurrency & Performance (Udemy, 2024) • Rust (Udemy, 2024) • CCNA (Cisco, 2023) • JPA & Hibernate (Udemy, 2022) • JUnit, Mockito & TDD (Udemy, 2022) • DDD (Udemy, 2022)
